

Helping Veterans navigate dental care

OVERVIEW

DenScore™ is a web application that provides treatment decision support and care navigation so Veterans make smarter decisions about their oral health and dental care needs.

PROBLEM

Most people do not have adequate dental expertise to know if they're making smart decisions about dental treatment or their oral health. Furthermore, the majority of Veterans lack VA dental benefits, and even if they have dental insurance, they have no way of knowing if they're getting the most appropriate dental care or doing the right things to prevent dental disease.. This leads to poor treatment outcomes and increased costs for Veterans and the VA.

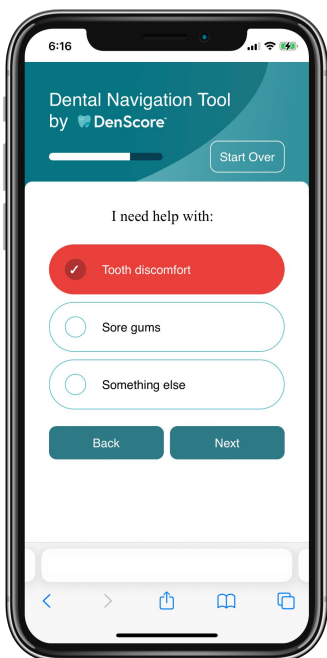

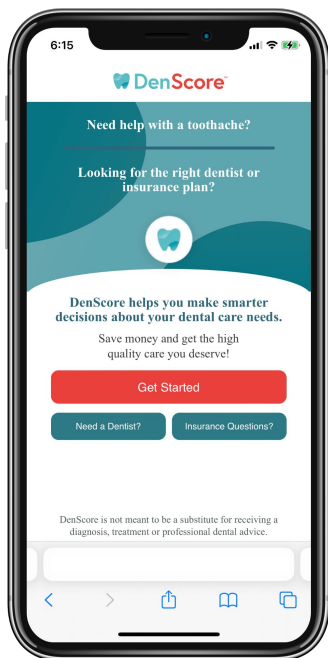

SOLUTION

DenScore's web application provides evidence-based guidance so Veterans aren't making important dental decisions alone. Whether they're navigating a dental problem, need a new dentist, have questions about insurance or anything else, DenScore is the only web application that provides answers to Veterans' most pressing questions when it matters most.

Value Proposition

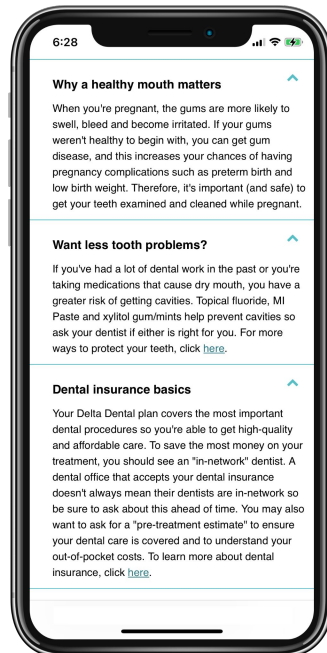

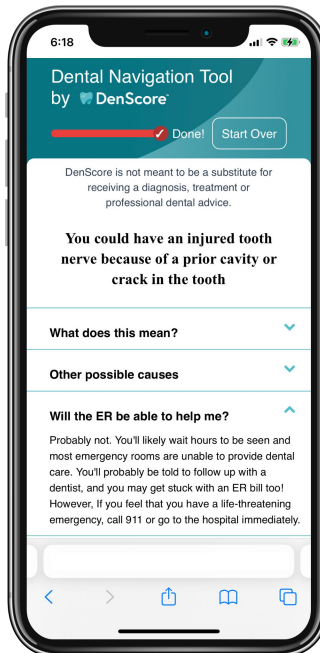

Patient Experience

Over 80% of people use DenScore after hours or on the weekends when they're unable to reach a dental office, insurance plan or their HR department for help. By offering DenScore's free web application to Veterans, VA medical centers will be able to help more Veterans get higher quality, more personalized and affordable dental care.

Better Health Outcomes

DenScore provides dental advice tailored to medical conditions so Veterans have better health outcomes. By educating Veterans about dental disease prevention, opioid use, dental ER visits and more, DenScore helps VA medical centers reduce healthcare costs.

Oral Health Equity

DenScore ensures marginalized groups, such as Veterans, receive important oral health guidance that hasn't been provided previously because of barriers they faced when accessing dental care in the past.
